

## Hosted Antispam for Business

powered by SpamStopsHere™ from Greenview Data

SpamStopsHere blocks spam, phishing scams, viruses and other email threats in the Cloud, before they can damage your business or reputation.

SpamStopsHere blocks 99.5% of spam with zero-hour malware protection and almost no false positives (<0.001%), without custom tuning. No more constant searching through your spam box for important emails from customers, patients or clients.

And, like our other hosted email services, **24/7/365 live support** is included with all editions.

**Blocks 99.5% of Spam and Delivers 99.999% of Good Email**

### Minimize Risk

We've designed SpamStopsHere for business, including legal, healthcare and financial; as well as non-profits and governments. It provides secure and affordable email antispam and antivirus protection.

SpamStopsHere is exceptionally good at detecting and blocking **phishing scams**, one of the most dangerous forms of email threats. Corporate executives are specifically targeted by phishing attacks, which are on the rise, so blocking them is critical to protect your business.

*"...spam simply stopped."*

### Security

Our proprietary multi-layer filtering engine maximizes spam and virus detection and minimizes false positives better than typical Bayesian / Heuristic antispam.

With our exclusive *Spamalyzer* and 24/7/365 live threat analysis team, we block dangerous phishing scams, time-wasting spam and other email threats for you.

### Business Protection

We block threats in the Cloud, before they reach your infrastructure and damage your business. That can also decrease the load on your email servers.

Our exclusive Store and Forward 5-day automatic email recovery prevents lost email during disasters and other downtime.

### Reliability

SpamStopsHere is backed by an SLA with **99.99% guaranteed uptime**, implemented with real-time replication between geographically diverse data centers.

SpamStopsHere filters out spam in real time, so you get your email within seconds.

### Immediate ROI

As a cloud-based service, SpamStopsHere requires no additional infrastructure, hardware or software. Simply use your existing web-enabled PCs, notebooks, netbooks, phones, etc.

Setup is easy, there is no tuning required, and there are no maintenance costs or long-term commitments... **just simple monthly pricing with annual and volume discounts.**

### Unlimited 24/7/365 Support

As with our other cloud email services, unlimited 24/7/365 live support is **included**. Call, chat or email us anytime.

## Multi-Layer Antispam Filter

Typical Bayesian/Heuristic antispam looks at where email came from and for individual words. It can only guess the likelihood any email is spam or not, sending a lot of spam to your inbox and good email to your spam folder.

SpamStopsHere is different. Our multi-layered filter and massive database of reliable spam indicators block spam with almost no false positives or false negatives. Email from clients or patients get through without all the spam.

Our proprietary filtering includes:

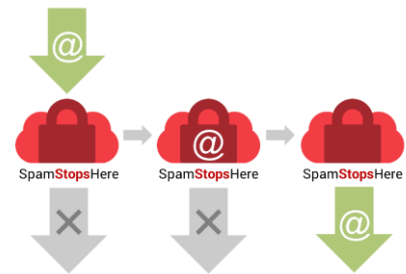

- **URL Filter:** Blocks spam based on the link in the email that the spammer wants you to click. Spammers can easily change most email content, but not those “click-me” links, so we know spam when we see it.
- **Phrase and Pattern Filters:** Identify spam based on profiles of active campaigns, not single words, accurately separating good email from spam.

## 5-Day Store and Forward

### Prevent Lost Email

SpamStopsHere™ comes with our Store and Forward service. During blackouts and natural disasters, our redundant, geographically diverse server clusters continue to function and receive your email.

Store and Forward collects your inbound e-mail in a "spool" for 5 days (or more) while your mail server is off-line for any reason (e.g., power failure, system crash, routine maintenance). When your server comes back online, Store and Forward automatically delivers the spooled e-mail to you.

Store and Forward 5-Day Email Recovery

## SpamStopsHere Features
