Email Spam and Malware Protection for Business powered by SpamStopsHere™
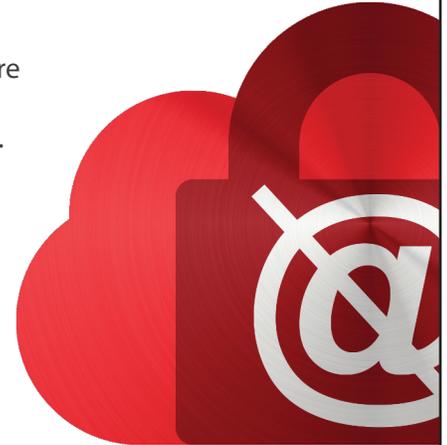

SpamStopsHere blocks spam, phishing scams and email viruses in the Cloud before they can harm your business. It blocks 99.5% of spam with zero-hour malware protection and delivers 99.999% of legitimate email. *24/7 live support* is included.

Email Security with No Tuning Required

Proprietary multi-layer filtering maximizes spam and virus detection and minimizes false positives better than typical Bayesian Heuristic antispam.

Business Protection and Fast ROI

Redirect scarce IT resources. SpamStopsHere does not require custom tuning or a learning period. Spend less time constantly searching your quarantine for missing email.

"... spam simply stopped" | Scott Clark, BuzzMaven Labs

Seamless Integration

SpamStopsHere integrates seamlessly with Greenview Data's hosted email services and all other leading email hosts, both hardware and cloud-based. Use it as an Office 365 or Exchange spam filter.

Prevents Lost Email

Our exclusive Store and Forward 5-day automatic email recovery prevents lost email during disasters and other downtime.

Stops Dangerous Phishing Scams

SpamStopsHere is exceptionally good at detecting and blocking phishing attacks (one of the most dangerous forms of spam), which is critical to protecting your business.

Multi-Layered Spam Filters

Our proprietary multi-layered engine blocks spam primarily based on its content (links to dangerous sites, complex phrases and patterns), not where it came from. It simply blocks more spam and delivers more good email.

Configurations

All editions are easy to setup, require little maintaintence and no tuning. They work seamlessly with almost any hardware or cloud-based mail server, and come with our legendary **unlimited 24/7/365 live support.**

Standard Edition includes our exclusive multi-layered spam filtering engine, zero-hour attachment malware filtering, and our Store and Forward 5-day email spool to prevent lost email during server outages.

Business Edition adds email anti-virus scanning and TLS encryption.

Professional Edition adds a quarantine and multiple mailserver support

Enterprise Edition adds outbound filtering to help protect your business reputation.
